

SurveyMonkey Achieves International Organization for Standardization (ISO) Security Recognition from the British Standards Institute

September 23, 2019

Internationally-recognized certification advances company's security operations to support enterprise growth

SAN MATEO, Calif., Sept. 23, 2019 (GLOBE NEWSWIRE) -- SurveyMonkey (Nasdaq: SVMK) today announced that the company has achieved ISO/IEC 27001:2013 (ISO 27001) certification, one of the most globally recognized information security standards defined by the International Organization for Standardization (ISO).

"ISO 27001 is one of the most rigorous security standards in the world. Security has always been a top priority at SurveyMonkey, and achieving this milestone means that our customers can be confident that we operate with the highest standards when handling and protecting their data," said Brent Williams, chief information security officer at SurveyMonkey. "As SurveyMonkey continues to grow its enterprise customer base and expand internationally, we are dedicated to continuous security improvements that directly benefit our customers and instill trust. ISO accreditation helps to ensure we have the systems in place to accomplish that."

SurveyMonkey continues to make enterprise-grade security a top priority as the company grows its enterprise customer base. Earning the ISO 27001 certification helps to validate SurveyMonkey's security capabilities with some of the world's leading brands. SurveyMonkey Enterprise secures confidential data with SSO, data encryption and access controls, while offering security features that support customer compliance with data regulations such as HIPAA and GDPR.

In addition to the ISO certification, recent milestones that illustrate SurveyMonkey's commitment to security include the opening of the company's [European Data Center](#) in May 2019, a public cloud infrastructure that enables SurveyMonkey to host data locally for customers located or doing business in the region. The company also launched Teams plans in late 2018, a product feature that helps organizations securely collaborate.

The ISO 27001 certification audit was conducted by BSI, the British Standards Institution. Focused on continuous security and compliance, the certification will require controls audits throughout the year, with an annual inspection by BSI to ensure ongoing compliance.

[Usabilla](#) by SurveyMonkey, its leading global voice of customer solution, previously announced its ISO 27001 certification in July 2019.

About SurveyMonkey

SurveyMonkey is a leading global survey software company on a mission to power the curious.
